Breaking design boundaries

The new BlackBerry® Passport lets you do more with an innovative new design. The large 4.5-inch square touchscreen provides an excellent viewing and reading experience. It also allows you to quickly view and reply to emails, as well as browse the web.

A legendary typing experience

The new touch-enabled keyboard from BlackBerry® helps you type quickly, accurately and effortlessly. Experience the new 3-row keyboard with a 4th dynamic row that displays on-screen and adjusts to showcase numbers and symbols when you are typing an email or password. You can now scroll faster when browsing by simply running your fingers over the touch keyboard. You can also control the cursor with a simple double-tap, and then drag your finger across the keyboard to drop the cursor in the right place.

Blazing-fast LTE speeds

The BlackBerry® Passport runs on Canada's largest LTE network[1], reaching super-fast maximum download speeds of up to 150 Mbps[2] (expected average download of 12-40 Mbps). And unlike some other carriers, the Bell network never falls back to 2G, so you can get on the world's fastest mobile network technology – now with speeds up to 45% faster than before[3].

BlackBerry® Assistant

Designed to keep you organized, informed and productive, you can now stay up to date with your emails and calendar appointments, see what is trending on social media, access your music, and check your navigation or the weather – all with a simple voice or text command. BlackBerry® Assistant is compatible with any Bluetooth device, so more can be done with less effort.

BlackBerry® Blend

Get instant access to your BlackBerry® smartphone messaging and applications right on your desktop or tablet, with the new BlackBerry® Blend software. You can now get message notifications, as well as read and respond to emails, texts and other messages, regardless of what device or operating system you are using.

The battery that keeps going

Start the day early and stay out late. The BlackBerry® Passport battery lasts up to 30 hours per charge.

1. With compatible devices based on total square kms of coverage on the shared LTE network available from Bell vs. Rogers' LTE network. See bell.ca/lte for details.
2. These are theoretical peak speeds. Actual speeds may vary due to topography, environmental conditions, device type and other factors.
3. Based on comparison of the shared LTE network theoretical download speeds of up to 75 Mbps (expected average download speeds 12-25 Mbps) vs. the enhanced shared LTE network theoretical download speeds of up to 110 Mbps (expected average download speeds 14-36 Mbps). Actual speeds may vary due to topography, environmental conditions, device type and other factors.
